

Daily Work Progress Report

Name: Ishimwe Serge
Position: Frontend Developer
Date: 10 September 2025

Introduction

Today, I worked on two key systems: Aby HR Management and Abyride.

In the HR system, I focused on improving the recruitment process, enabling HR staff to manage postings and candidates more effectively.

In the Abyride Driver App, I improved reservation handling and navigation, making the driver experience more accurate, seamless, and reliable.

Key Tasks Completed

Aby HR Management – Employee Recruitment Process

1. Job Posting

- Enabled HR staff to post job openings directly in the system.

2. Job Visibility

- Candidates can now view available job postings within the platform.
- Added detailed job descriptions for improved transparency.

3. Job Applications

- Candidates are able to apply for job posts directly through the platform.
-

Abyride – Driver Section Improvements

1. Reservation Details Page

- Enhanced to manage both pickup and drop-off processes.
- Restricted the “*arrived*” status so drivers can only mark arrival if within 50 meters of the pickup or drop-off location.

2. Map Enhancements

- Added multi-direction navigation:
 - Directions to the pickup location.
 - Directions from pickup to drop-off.

3. Driver Mobile App Update

- Integrated all improvements into the Driver Mobile App, ensuring consistency across platforms.
-

Summary

Today’s updates improved two core systems:

- **Aby HR Management:**
 - HR can post jobs, candidates can view details, and apply directly in the system.
- **Abyride Driver App:**
 - Enhanced reservation handling with stricter arrival logic.
 - Improved navigation with multi-direction support.
 - Delivered a more consistent driver experience across platforms.

Together, these improvements increase efficiency, transparency, and reliability in both systems.
