

## Daily Work Progress Report

**Name:** Mihigo Honore

**Position:** Software Developer

**Date:** 3rd September 2025,

### Introduction

Today, I worked on improving the Employee Contract feature in the Aby HR Management System. This feature is very important because it allows the company to record, store, and manage the contracts of employees in a clear and organized way. I made updates both on the part of the system that the staff sees (frontend) and the hidden part that controls the data (backend).

### Key Tasks Completed

#### 1. Employee Contract Management

- Added the ability to create and update employee contracts directly in the system.
- Made sure contract details such as start date, end date, position, and terms are stored securely.

- Improved the interface so HR staff can easily enter contract details without confusion.
- Connected the system so that whenever contracts are added or updated, the information is saved correctly and safely in the background.
- Ensured contracts can be viewed and managed later, helping HR staff keep track of employee agreements in one place.

#### Pending Work

- The Employee Contract feature is not yet fully finished. Some advanced functionalities and validations are still under development and will be completed in the next updates.

---

## Summary

By working on the Employee Contract feature, the Aby HR Management System is now more useful and complete.

This improvement means:

- HR staff can easily record and manage contracts without relying on separate documents.
- The company has better organization since all employee agreements are in one system.
- Data is secure and reliable, reducing the risk of losing important contract information.
- It saves time and effort, making HR work more efficient.
