📝 Introduction

Today, I worked on improving the Aby HR Management System by focusing on client management, admin account settings, and strengthening account security. The goal was to provide a more functional, secure, and user-friendly experience for administrators and clients.

✅ Key Tasks Completed

1. **👥 Client Management Features**

   - **Added functionality to register new clients and view their detailed information.**

   - **Implemented real-time updates for adding, editing, and deleting clients.**

   - **Enabled exporting client details as PDF for record-keeping.**

2. ⚙️ **Admin Account Settings Enhancements**

   ○ **Improved the admin profile section to allow editing of account details.**

   ○ **Added the ability to view more comprehensive account information.**

3. 🔐 **Two-Factor Authentication (2FA) Setup**

   ○ **Integrated a system for admins to enable or disable 2FA.**

   ○ **Strengthened account security by adding this extra authentication step.**

🔑 **Next Steps (Ongoing Work)**

   ○ **Implementing secure password change functionality.**

   ○ **Adding support for connecting with Google accounts for easier login.**

📚 **Summary**

The improvements to the Aby HR Management System provide:

● **A powerful client management module with full CRUD (create, read, update, delete) features and PDF export.**

● **Enhanced admin account settings, giving administrators better control over their profiles.**

● **Stronger account security through optional Two-Factor Authentication.**

● **Upcoming features such as password change and Google account integration to further boost security and accessibility.**

These updates make the system more efficient, secure, and user-friendly for both clients and administrators.
